## INDIVIDUALIZED, EVIDENCE-BASED ADDICTION TREATMENT AND RESEARCH IN A NEW PURPOSE-BUILT RESIDENTIAL SETTING

Wellbridge is pioneering a model for addiction care in which clinical practice and research converge to innovate new approaches for addiction treatment. Traditionally, research insights have not been readily applied to treatment, and clinicians have owned the burden of exacting and optimizing care for individuals. Wellbridge has set out to change this. By co-locating our addiction research center alongside our treatment facilities, we inspire continuous collaboration between clinicians and scientists to optimize and accelerate the translation of science directly to patient care.

### WELLBRIDGE TREATMENT CENTER

- Led by medical director, Harshal Kirane, MD
- Inpatient medical stabilization/detox (20 beds)
- Inpatient rehabilitation (40 beds)
- Residential extended stay (20 beds)
- 11,000 sq ft fitness and wellness center
- 2,200 sq ft center for creative expression

### WELLBRIDGE CENTER FOR ADDICTION SCIENCE

- Led by scientific director, Jon Morgenstern, PhD
- 6,000 sq ft research pavilion to accommodate 20+ researchers
- Accelerate the translation of discovery and knowledge into actionable treatments

Wellbridge is one of the first residential addiction treatment centers to partner with a major health network system, Northwell Health, New York's largest healthcare provider.

## WELLBRIDGE TREATMENT APPROACH

**Evidence-based and OASAS-compliant** programmatic levels of care including medical stabilization, inpatient rehabilitation and extended stay.

**A dynamic interdisciplinary approach** to clinical care including physician-level care, psychotherapy, and nursing.

**Together with Northwell Health**, Wellbridge is uniquely able to provide its clients with access to comprehensive patient care, and access to the latest research and treatment available.

**Family therapy, creative expression and comprehensive wellness services** are integrated into evidence-based clinical care programs.

**The Wellbridge Family Program™** is grounded in a family's need to accommodate and support a lasting change. This comprehensive program offers proven skill-based techniques and coping skills. We strongly encourage regular participation in individual family sessions, multi-family sessions and support groups.

## BRAND NEW PURPOSE-BUILT FACILITY DESIGNED AROUND THE PATIENT

The facility is purposely built to support the full continuum of personalized addiction care, wellness services, creative therapy, and family support. Accommodations, both private and shared, are tastefully designed to offer a tranquil reprieve from therapy. All have private baths.

## WHAT TO EXPECT WHEN YOU REFER A PATIENT

Collaboration is a priority at Wellbridge. You can expect ongoing communication with a staff member who speaks your professional language during the referral, admission, treatment and discharge processes. Wellbridge respects your position as the referring clinician and incorporates learnings from the patient's history into the treatment plan. It is a priority to return patients to their referring clinician or coordinate aftercare with their clinician's guidance.

**Your patient can't wait until tomorrow. We are ready to move quickly today.
